MADE IN INDIA • ATMANIRBHAR BHARAT

Engineering Collaboration: BCN In-House Technology Team

SOVEREIGN UNMANNED AERIAL SYSTEMS PROGRAM

SOVEREIGN AUTONOMOUS SWARM & AIR DEFENCE UAV CAPABILITY

A dedicated sovereign unmanned aerial warfare architecture engineered to Indian Armed Forces requirements—delivering autonomous multi-tier swarm reconnaissance, attrition-tolerant mesh command & control, and high-altitude forward border overwatch.

PILLAR 01 TACTICAL SWARM & ISR

SWARM & OVERWATCH ISTAR

[SECT 01]

MULTI-LAYER DISTRIBUTED SURVEILLANCE & MESH C2

Coordinated heterogeneous swarm linking disposable micro Nano-scouts (350–450g) and long-endurance Overwatch UAV relays (~20kg) via self-healing peer-to-peer data-links.

- Decentralized autonomous collision avoidance and patrol logic
- Real-time EO/IR thermal target tracking streamed to tactical GCS
- Attrition-tolerant multi-node coordination in contested airspace

SWARM NODE SIZE

6 to 24+ Units

OPERATING CEILING

8,000+ ft AMSL

OVERWATCH MTOW

~20 kg Class

C2 DATA-LINK

Secure Mesh RF

PILLAR 02 CONTESTED C2 & EW HARDENING

TACTICAL GCS & RESILIENT C2

[SECT 02]

ANTI-JAM MESH TELEMETRY & SOVEREIGN NAVIC SYNC

Ruggedized tactical ground command console and anti-jamming RF communication architecture engineered for contested electronic warfare environments and GPS-denied forward borders.

- Unified C2 workstation managing simultaneous multi-UAV swarm sorties
- Frequency-hopping spread spectrum with optical dead-reckoning fallback
- SORA SAIL II/III military safety compliance with emergency FTS termination

C2 DATALINK

P2P Encrypted Mesh

OPERATIONAL RADIUS

100+ km BVLOS

NAVIGATION

NAVIC + Anti-Jam INS

SAFETY CLEARANCE

SORA SAIL II/III

SOVEREIGN AIR DEFENCE DOCTRINE

UNIFIED INDIAN ARMED FORCES ARCHITECTURE

- Autonomous Swarm Intelligence: Decentralized bounding overwatch and collaborative targeting
- High-Altitude Border Envelope: Sub-zero temperature and Himalayan wind gradient rated
- Contested Spectrum Hardening: NAVIC satellite sync + frequency-hopping RF data-links
- 100% Sovereign IPR: Indigenous carbon-composite fabrication and iDEX / MoD alignment

8,000+ ft AMSL

HIGH-ALTITUDE OPERATIONAL ENVELOPE

Engineered for forward Himalayan posts, steep valley patrols, and sub-zero border warfare.

50-150 km

ENCRYPTED SWARM MESH RADIUS

BVLOS frequency-hopping RF telemetry with peer-to-peer relay for EW-contested environments.

6-24+ Nodes

HETEROGENEOUS SWARM FLEET

Decentralized teaming of sub-500g nano-scouts and 20kg high-altitude overwatch mothership relays.

Make in India

SOVEREIGN IPR & ASSEMBLY

Complete indigenous production roadmap aligned with iDEX and Ministry of Defence procurement guidelines.

PROGRAM BLUEPRINT & TABLE OF CONTENTS

SWARM ARCHITECTURE
& TECHNICAL DEFENCE INDEX

A comprehensive operational reference detailing sovereign autonomous swarm intelligence, heterogeneous air reconnaissance, tactical C2, and frontline border air defence architectures engineered to Indian Armed Forces requirements.

● 12 TECHNICAL SECTIONS

● 3 DEFENCE CAPABILITY PILLARS

▲ 6-PAGE SOVEREIGN DEFENCE BROCHURE

★ MAKE IN INDIA & IDEX COMPLIANT

PART I • SWARM C2

SWARM & OVERWATCH ISTAR

AUTONOMOUS SWARM INTELLIGENCE & CONTESTED MESH C2

01

EXECUTIVE VISION & DOCTRINE

Forward Border Operations • Multi-Tier Defence

High-altitude border operational requirements and multi-tier sovereign air defence integration doctrine.

PAGE 03

02

HETEROGENEOUS SWARM P2P MESH

Peer-to-Peer Mesh • Autonomous Patrol

Distributed peer-to-peer RF mesh routing, decentralized patrol logic, dynamic collision avoidance, and node discovery.

PAGE 04

03

6-NODE VS 24-NODE DEPLOYMENT

Tactical Patrol • Contested Saturation Screen

Scalable squad-level tactical patrol (6 units) up to wide-area contested border saturation screens (24+ units).

PAGE 04

04

AUTONOMOUS BOUNDING OVERWATCH

Cooperative Search • Dynamic Target Handoff

Decentralized bounding overwatch search, cooperative sector handoff, and attrition-tolerant node re-routing.

PAGE 04

PART II • AIR PLATFORMS

NANO-SCOUT & OVERWATCH

SUB-500G MICRO SCOUTS TEAMING WITH 20KG RELAYS

05

NANO-SCOUT MICRO-UAV (350G)

Pocket Deployable • Ultra-Low Acoustic

Disposable micro air vehicle for ultra-low acoustic forward scout missions, squad reconnaissance, and perimeter breach detection.

PAGE 05

06

OVERWATCH TACTICAL RELAY (~20KG)

Long-Endurance VTOL • High-Altitude Relay

High-altitude VTOL mothership relay maintaining airborne mesh connectivity and broad-area surveillance at 8,000+ ft AMSL.

PAGE 05

07

MULTI-SPECTRAL EO/IR PAYLOADS

Dual HD Optical Zoom • LWIR Thermal Core

Stabilized daylight zoom cameras paired with uncooled microbolometer thermal imagers for 24/7 all-weather target tracking.

PAGE 05

08

SUB-ZERO HIMALAYAN ENVELOPE

Cold-Soak Conditioning • Mountain Wind Handling

Active battery thermal management, anti-icing carbon composite rotors, and sustained operation in high mountain wind gradients.

PAGE 05

PART III • BATTLESPACE C2

TACTICAL GCS & HARDENING

HARDENED BATTLESPACE C2, NAVIC TELEMETRY & PRODUCTION

09

UNIFIED TACTICAL GCS WORKSTATION

Ruggedized Console • Multi-UAV Sortie

Ruggedized military operator console managing simultaneous multi-UAV swarm sorties, live video feeds, and mission profiles.

PAGE 06

10

EW HARDENING & NAVIC TELEMETRY

Anti-Jam Frequency Hopping • NAVIC Sync

Anti-jamming frequency-hopping RF data-links, sovereign NAVIC satellite synchronization, and optical dead-reckoning fallback under EW denial.

PAGE 06

11

SORA SAIL II/III SAFETY STANDARDS

DGCA / Military Clearances • FTS Mitigation

Specific Operations Risk Assessment (SORA SAIL II/III), emergency flight termination (FTS), and sovereign military airspace clearances.

PAGE 06

12

INDIGENOUS PRODUCTION & CONTACTS

Composite Autoclave • IDEX / MoD Procurement

Sovereign carbon-composite fabrication, localized component assembly, and IDEX / MoD procurement roadmap for scalable Indian production.

PAGE 06

SOVEREIGN DOCTRINE

UNIFIED AIR ARCHITECTURE

One tactical ecosystem linking micro swarm scouts, overwatch relays, and ground control under synchronized command.

• STANAG 4586 Interoperable

SWARM AUTONOMY

DECENTRALIZED MESH LOGIC

Autonomous collaborative search patterns, dynamic node re-routing, and seamless target handoff without single point of failure.

• Distributed AI Engine

CONTESTED SPECTRUM

NAVIC • MESH ENCRYPTION

Resilient anti-jam frequency hopping with autonomous optical dead-reckoning fallback under intense GNSS spoofing or jamming.

• Dual-Band NAVIC • INS

MAKE IN INDIA

100% SOVEREIGN IPR & MRO

Domestic carbon-composite production and localized depot-level lifecycle maintenance aligned with Defence Acquisition Procedure (DAP).

• IDEX / AITTI Compliant

MULTI-DOMAIN UNMANNED AERIAL ECOSYSTEM • DEFENCE SCALING ROADMAP

Phased Deployment: Prototyping & High-Altitude Trials → MoD User Evaluation → Sovereign Induction

PART I: TACTICAL SWARM & OVERWATCH ISTAR • SECTION 01

SOVEREIGN BORDER DOCTRINE
& MULTI-TIER AERIAL ARCHITECTURE

An indigenous operational framework engineered for the unforgiving geography of India's forward northern and western frontiers—unifying expendable frontline swarm intelligence, persistent overwatch relays, and runway-independent cargo VTOL resupply under contested electronic warfare conditions.

THE OPERATIONAL CHALLENGE

CONTESTED MOUNTAIN FRONTIER

HIGH-ALTITUDE HIMALAYAN FRICTION

- ✗ **Severe Himalayan Environment:** High-altitude terrain (8,000-16,000 ft AMSL), thin air reducing rotor efficiency, gale-force wind shears, and sub-zero temperatures down to -25°C.
- ✗ **Contested Electronic Warfare:** Adversary wideband RF jamming, satellite navigation (GNSS) spoofing, and severe communication attenuation through deep mountain valleys.
- ✗ **Runway Infrastructure Deficit:** Isolated frontline outposts, treacherous ridgelines, and glacial passes lack paved airstrips, making conventional fixed-wing UAVs entirely unviable.
- ✗ **High-Risk Manned Sorties:** Reliance on piloted helicopters incurs extreme financial expense, vulnerable flight paths to MANPADS threats, and weather grounding risks.

SOVEREIGN AIR ARCHITECTURE

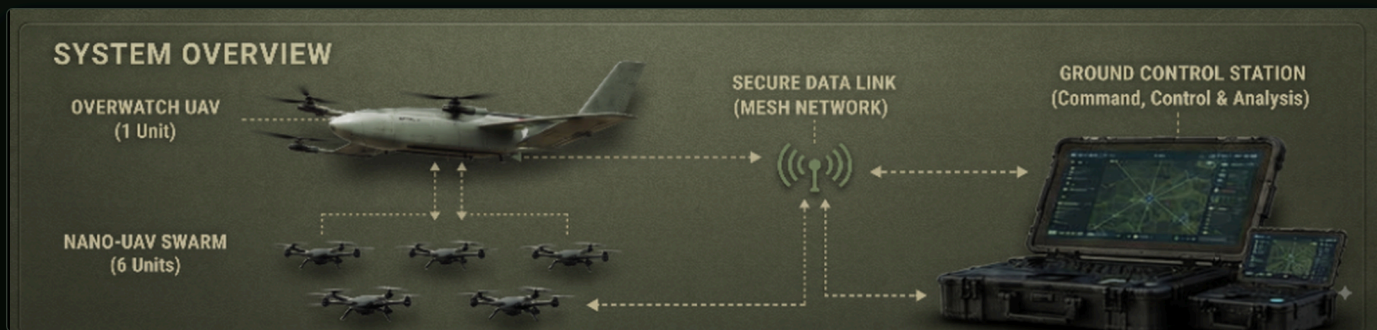

MULTI-TIER INTEGRATION

AUTONOMOUS DECENTRALIZED TEAMING

- ✓ **Zero Runway Dependence:** 100% vertical takeoff and landing (VTOL) enables autonomous launch and recovery from small rocky outpost pads, trucks, or forward bases.
- ✓ **Self-Healing Swarm Mesh:** Decentralized peer-to-peer RF data routing ensures continuous telemetry and video streaming even if multiple nodes are jammed or destroyed.
- ✓ **Anti-Jam NAVIC Navigation:** Autonomous flight control coupled to indigenous NAVIC satellite synchronization with fallback optical visual-inertial odometry (VIO).
- ✓ **Cross-Functional Payload Architecture:** Swappable sensor bays and cargo modules allowing tactical transitions between ISR overwatch and urgent trauma resupply.

SYNCHRONIZED MULTI-TIER BATTLEFIELD SYSTEM ARCHITECTURE

TACTICAL SCHEMATIC • DISTRIBUTED C2 NETWORK

TIER 01 • FRONTLINE SCOUT

MICRO SWARM

NANO-SCOUT SWARM NODE

Ultra-compact, low-acoustic micro UAVs deployed in 6 to 24+ unit swarms for immediate trench clearance, perimeter overwatch, and frontline target handoff without exposing operators.

AUW / WEIGHT	LOITER TIME
350-450 g	25-35 Min
OPERATING BAND	PAYLOAD
Mesh ISM / UHF	Micro EO / IR

TIER 02 • ENDURANCE RELAY

TACTICAL OVERWATCH

OVERWATCH ISTAR RELAY

Medium-range, high-altitude tactical air vehicle acting as an airborne communication relay and persistent surveillance platform equipped with gyro-stabilized optical/thermal sensors.

PLATFORM MTOW	SERVICE CEILING
~20 kg Class	16,000 ft AMSL
MISSION RADIUS	SENSOR GIMBAL
50-80 km Link	EO/IR + LRF

TIER 03 • BATTLEFIELD C2

TACTICAL GCS

TACTICAL GCS & C2 NODE

Ruggedized field command workstation synchronizing multi-UAV swarm sorties, real-time EO/IR thermal targeting feeds, and sovereign NAVIC encrypted data-links in contested GPS-denied environments.

C2 CONSOLE	MESH BATALINK
Dual 15.6" Screen	FHSS 32 dB Jom-Res
NAVIGATION	SORTIE CAPACITY
NAVIC L5/S + VIO	24+ Concurrent

16,000 ft

HIGH-ALTITUDE OPERATIONAL CEILING

Aerodynamically tailored high-aspect wings and optimized rotor profiles for thin-air mountain passes.

-25°C to +55°C

EXTREME THERMAL ENVELOPE

Sub-zero battery thermal management coupled with desert dust and monsoon water-ingress protection.

45 km/h

MOUNTAIN WIND SHEAR RESISTANCE

Autonomous dynamic rotor torque balancing resisting severe mountain valley updrafts and gusts.

100% Runway-Free

TACTICAL VTOL DEPLOYMENT

Independent vertical ascent and landing from isolated border posts, warship decks, or light vehicles.

▸ DECENTRALIZED SWARM COMMAND & BATTLESPACE DYNAMICS

HETEROGENEOUS SWARM FLEET & AUTONOMOUS MESH C2

A resilient, self-healing peer-to-peer RF mesh architecture coordinating disposable sub-500g Nano-scouts and long-endurance Overwatch VTOL relays—delivering continuous multi-vector border overwatch, collaborative targeting, and uncompromised survivability under electronic warfare denial.

● SQUAD (6 UNITS) & THEATRE (24+ UNITS)

◆ PEER-TO-PEER ENCRYPTED RF MESH

▲ BVLOS 100+ KM COVERAGE

★ ATTRITION-TOLERANT SELF-HEALING

6-NODE TACTICAL SQUAD SPREAD

SN47-SYS-06

SQUAD RECON • RAPID FORWARD POST

SYSTEM OVERVIEW

FORWARD BORDER PATROL & PERIMETER BREACH DETECTION

Lightweight tactical deployment engineered for company-level outposts and rapid reconnaissance. Couples four agile micro Nano-scouts with two high-altitude Overwatch relays for continuous localized overwatch.

FLEET COMPOSITION

4x Nano + 2x Overwatch

INTRA-SWARM LATENCY

<85 ms Real-time

TACTICAL MESH RANGE

25-40 km Line-of-Sight

SETUP & DEPLOYMENT

<4 Minutes

- Low-acoustic forward scout leapfrogging across steep mountain ridges
- Dual airborne relay redundancy ensuring unbroken squad tablet video feed
- Autonomous terrain-following avoiding forward radar cross-sections

24+ NODE SATURATION THEATRE SCREEN

SN47-SYS-24

THEATRE OVERWATCH • HIGH DENSITY

SYSTEM OVERVIEW

WIDE-AREA CONTESTED INFILTRATION CURTAIN & C-UAS SCREEN

Wide-area sovereign border curtain deploying 18+ Nano-scouts coordinated by 6 multi-spectral Overwatch relays. Delivers continuous perimeter sealing and collaborative target tracking across complex terrain.

FLEET COMPOSITION

18x Nano + 6x Overwatch

SIMULTANEOUS TRACKS

32+ Target Vectors

OPERATIONAL COVERAGE

100+ km Sector Radius

ATTRITION SURVIVABILITY

Up to 40% Node Loss

- Decentralized dynamic multi-hop packet routing without single point of failure
- Collaborative bounding overwatch and automatic target handoff between nodes
- Self-reconstituting mesh geometry filling coverage holes if nodes are engaged

01 P2P ENCRYPTED MESH

Ad-hoc decentralized peer-to-peer data-links operating on frequency-hopping spread spectrum (FHSS). Every drone functions as an autonomous transceiver relay.

02 BOUNDING OVERWATCH

Automated leapfrogging logic: forward Nano-scouts advance while high-altitude Overwatch relays maintain elevated optical overwatch and RF line-of-sight.

03 DYNAMIC TARGET HANDOFF

Continuous kinematic track maintenance: when targets traverse boundaries, adjacent swarm nodes automatically reposition and slew optical gimbals to preserve lock.

04 GPS-DENIED AUTONOMY

Under aggressive electronic jamming or GNSS denial, swarm units switch to visual inertial odometry (VIO) and NAVIC backup to maintain spatial precision.

6 to 64+ Nodes

SWARM MESH SCALABILITY

Modular protocol expansion from squad reconnaissance to brigade-level saturation.

<45 ms

INTRA-SWARM ROUTING LATENCY

Low-latency tactical telemetry and telemetry relay across multi-hop peer nodes.

32 dB

ANTI-JAM PROCESSING GAIN

Frequency-hopping spread spectrum with robust immunity in dense electronic countermeasure zones.

<250 ms

DYNAMIC RECONSTITUTION

Instantaneous network re-routing and autonomous sector coverage filling upon node attrition.

🇮🇳 MAKE IN INDIA • ATMANIRBHAR BHARAT

Engineering Collaboration: **BCN In-House Technology Team**

TACTICAL AIR VEHICLE SPECIFICATIONS & OPTRONICS

NANO-SCOUT & OVERWATCH AERIAL PLATFORM ENGINEERING

A high-performance two-tier indigenous air vehicle family engineered to operate in tactical symbiosis—pairing soldier-deployable sub-500g micro Nano-scouts for immediate obstacle overflight with long-endurance high-altitude Overwatch relays delivering continuous multi-spectral overwatch and airborne mesh gateway routing.

● NANO-SCOUT (350G CLASS)

◆ OVERWATCH VTOL (20KG CLASS)

▲ MULTI-SPECTRAL EO/IR & LRF

★ SUB-ZERO HIMALAYAN RATED

NANO-SCOUT MICRO-UAS

TIER 01 • FORWARD SCOUT

SUB-500G POCKET DEPLOYABLE

ACOUSTIC <38 dB

ULTRA-LOW ACOUSTIC SQUAD SCOUT & PERIMETER PROBE

Frontline infantry recon asset hand-deployable in under 15 seconds. Designed for forward crest overflight, urban room entry, and silent perimeter breach verification with zero thermal reflection.

ALL-UP WEIGHT	350-450 grams
FLIGHT ENDURANCE	18-22 minutes
OPERATIONAL RADIUS	3-5 km Line-of-Sight
DASH SPEED	45 km/h max
SENSOR SUITE	HD Daylight + Micro LWIR Thermal
ACOUSTIC SIGNATURE	<38 dB @ 25 meters
DEPLOYMENT MODE	Hand / Pocket Launch (<15s)

OVERWATCH VTOL RELAY

TIER 02 • AIRBORNE RELAY

~20KG CLASS HYBRID VTOL

8,000+ FT SERVICE CEILING

HIGH-ALTITUDE AIRBORNE RELAY & PERSISTENT ISTAR MOTHERSHIP

Runway-free tactical VTOL operating as the airborne command-and-control node. Bridges micro-swarm video feeds to tactical headquarters while executing 24/7 high-magnification electro-optical reconnaissance.

MAX TAKEOFF WEIGHT	~20 kg Class
MISSION ENDURANCE	120-180 minutes
OPERATIONAL RADIUS	100+ km BVLOS
SERVICE CEILING	8,000+ ft AMSL
GIMBAL OPTRONICS	30x Optical Zoom + Radiometric FLIR
LASER RANGEFINDER	Class 1 Eye-Safe (±1m @ 3km)
AVIONICS ARCHITECTURE	Dual-Band Anti-Jam NAVIC + Mesh

INTEGRATED OPTRONICS & TARGETING PAYLOADS

MULTI-SPECTRAL EO/IR & LASER TELEMTRY

Equipped with gyro-stabilized multi-sensor gimbals engineered for 24/7 all-weather surveillance across contested borders. Seamlessly switches between high-magnification visible spectrum optics and thermal thermography to defeat optical camouflage, mist, and night darkness.

DAYLIGHT 30X ZOOM

Sony Low-Light Sensor

High-definition target identification at 3,500m stand-off with automated motion tracking.

640x512 LWIR THERMAL

Uncooled Microbolometer

12 µm pixel pitch detects personnel heat signatures through smoke, foliage, and dense mist.

LASER RANGEFINDER

MGRS Target Geolocation

Computes instant target GPS/NAVIC grid coordinates for artillery and air defence handoff.

FLIR LWIR 640x512 • 28.6139°N / 77.2090°E

-20°C to +55°C

THERMAL OPERATING RANGE

Sub-zero active battery conditioning and high-desert cooling radiators.

45 km/h

MOUNTAIN GUST HANDLING

Tested against severe Himalayan wind shear and ridge downdrafts.

IP54 Enclosure

ENVIRONMENTAL PROTECTION

Sealed avionics bays resistant to driven rain, desert sand, and mountain dust.

MIL-STD-810H

STRUCTURAL RUGGEDIZATION

Carbon-composite monocoque construction built for rough tactical field handling.

SHIVNETRA 47

► BATTLESPACE COMMAND & INDIGENOUS SCALING

TACTICAL GCS, RESILIENT C2 & SOVEREIGN DEFENCE ROADMAP

Ruggedized military ground command consoles, anti-jam frequency-hopping RF datalinks, and sovereign NAVIC integration engineered for contested electronic warfare environments—backed by domestic composite autoclave manufacturing aligned with Make in India and iDEX Defence procurement.

• MIL-STD-810H TACTICAL GCS

◆ NAVIC L5/S-BAND DUAL SYNC

▲ SORA SAIL II/III DGCA CLEARANCE

★ 100% INDIGENOUS PRODUCTION (CIN VERIFIED)

UNIFIED TACTICAL GCS WORKSTATION

MIL-STD-810H • IP67 FIELD RUGGED

DUAL 15.6" 1500-NIT TOUCHSCREENS

8+ HOUR FIELD BATTERY

RUGGEDIZED FIELD CONTROL FOR HETEROGENEOUS SWARMS

All-weather military workstation capable of commanding simultaneous multi-UAV swarm sorties, real-time EO/IR thermal mosaics, and automated target handoff from a single tactical screen.

- Direct HOTAS flight sticks with instant emergency autonomous return-to-base (RTH)
- Encrypted intra-swarm telemetry monitoring 24+ nodes on dynamic 3D topographic map
- STANAG 4586 compliance for seamless Tri-Services command post data federation

CONTESTED EW SURVIVABILITY & NAVIC

ANTI-JAM • NAVIC SYNC

32 dB FHSS ANTI-JAM MARGIN

OPTICAL DEAD-RECKONING

ANTI-JAM COMMUNICATIONS & GPS-DENIED INTEGRITY

Multi-band telemetry architecture engineered to defeat aggressive enemy electronic jamming, GPS spoofing, and electromagnetic pulses in frontline contested airspace.

- Frequency-hopping spread spectrum (FHSS) across UHF and military C-band links
- Sovereign Indian NAVIC L5/S-band satellite positioning with anti-spoofing filters
- Specific Operations Risk Assessment (SORA SAIL II/III) and emergency FTS termination

01 AUTOCLAVE COMPOSITE FACILITY

INDIGENOUS AIRFRAME MANUFACTURING

Domestic high-temperature composite autoclave curing carbon-fiber monocoques for ultra-low radar cross-section, structural rigidity, and maximum payload fractions.

02 IDEX & DAP 2020 COMPLIANCE

100% SOVEREIGN INDIAN IPR

Complete design ownership and domestic component sourcing aligned with Ministry of Defence 'Make-I' and 'Make-II' indigenization mandates and tri-services procurement.

03 DEPOT-LEVEL LIFECYCLE MRO

LOCAL SPARES & SIMULATOR TRAINING

Comprehensive domestic maintenance, repair, and overhaul (MRO) with localized inventory and specialized VR simulator training curriculums for Indian Armed Forces operators.

SHIV-NETRA47 AIR DEFENCE SYSTEM PRIVATE LIMITED
